

DSV14196

+3.3V Supply EIA/TIA-232 5 Driver x 3 Receiver

General Description

The DSV14196/DSV14196T is a five driver, three receiver device which conforms to the EIA/TIA-232-E and the ITU-T V.28 standards.

The flow-through pinout facilitates simple non-crossover board layout. The DSV14196/DSV14196T provides a peripheral side one-chip solution for the common 9-pin serial RS-232 interface between data terminals and data communications equipment.

Features

- Conforms to EIA/TIA-232-E and ITU-T V.28
- 5 drivers and 3 receivers
- Flow-through pinout
- Failsafe receiver outputs high when inputs open
- 20-pin wide SOIC package
- LapLink® compatible — 230.4 kbps data rate
- +3.3V Logic Interface
- Commercial temperature range option DSV14196 (0°C to 70°C)
- Industrial temperature range option DSV14196T (−40°C to +85°C)

DSV14196 & DSV14196T

$T_A = +25^\circ\text{C}$

Symbol	Parameter	Conditions	Min	Typ	Max	Units
DRIVER CHARACTERISTICS						
t _{PHL}	Propagation Delay High to Low	R _L = 3 kΩ, C _L = 50 pF (Figures 1, 2)		60	350	ns
t _{PLH}	Propagation Delay Low to High			240	350	ns
t _r , t _f	Rise/Fall Time (Note 8)			40		ns
RECEIVER CHARACTERISTICS						
t _{PHL}	Propagation Delay High to Low	R _L = 1.5 kΩ, C _L = 15 pF (includes fixture plus probe), (Figures 3, 4)		150	350	ns
t _{PLH}	Propagation Delay Low to High			240	350	ns
t _r	Rise Time			40	175	ns
t _f	Fall Time			40	100	ns

Note 1: Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the devices should be operated at these limits. The table of Electrical Characteristics specifies conditions of device operation.

Note 2: Current into device pins is defined as positive. Current out of the device pins is defined as negative. All voltages are referenced to ground unless otherwise specified. For current, minimum and maximum values are specified as an absolute value and the sign is used to indicate direction. For voltage logic levels, the more positive value is designated as maximum. For example, if -6V is a maximum, the typical value -6.8V is more negative.

Note 3: All typicals are given for: $V_{CC} = +3.3\text{V}$, $V^+ = +12\text{V}$, $V^- = -12\text{V}$, $T_A = +25^\circ\text{C}$.

Note 4: Only one driver output shorted at a time.

Note 5: Generator characteristics for driver input: $f = 64\text{ kHz}$ (128 kbps), $t_r = t_f < 10\text{ ns}$, $V_{IH} = 3\text{V}$, $V_{IL} = 0\text{V}$, duty cycle = 50%.

Note 6: Generator characteristics for receiver input: $f = 64\text{ kHz}$ (128 kbps), $t_r = t_f = 200\text{ ns}$, $V_{IH} = 3\text{V}$, $V_{IL} = -3\text{V}$, duty cycle = 50%.

Note 7: If receiver inputs are unconnected, receiver output is a logic high.

Note 8: Refer to typical curves. Driver output slew rate is measured from the $+3\text{V}$ to the -3V level on the output waveform. Inputs not under test are connected to V_{CC} or GND. Slew rate is determined by load capacitance. To comply with a $30\text{ V}/\mu\text{s}$ maximum slew rate, a minimum load capacitance of 390 pF for DSV14196 or 620 pF for DSV14196T is recommended.

Pin Descriptions

Pin #	Pin Name	Description
2, 3, 4, 7, 9	D _{IN}	Driver Input Pins
12, 14, 17, 18, 19	D _{OUT}	Driver Output Pins, RS-232 Levels
13, 15, 16	R _{IN}	Receiver Input Pins, RS-232 Levels
5, 6, 8	R _{OUT}	Receiver Output Pins
10	GND	Ground
20	V ⁺	Positive Power Supply Pin (+9.0 ≤ V ⁺ ≤ +13.2)
11	V ⁻	Negative Power Supply Pin (-9.0 ≤ V ⁻ ≤ -13.2)
1	V _{CC}	Positive Power Supply Pin (+3.3V ±10%)

Applications Information

In a typical Data Terminal Equipment (DTE) to Data Circuit-Terminating Equipment (DCE) 9-pin de-facto interface implementation, 2 data lines and 6 control lines are required. The data lines are TXD and RXD. The control lines are RTS, DTR, DSR, DCD, CTS and RI.

The DSV14196/DSV14196T is a 5 x 3 Driver/Receiver and offers a single chip solution for this DTE interface. As shown in Figure 5, this interface allows for direct flow-thru interconnect. For a more conservative design, the user may wish to insert ground traces between the signal lines to minimize cross talk.

FAILSAFE RECEIVER OUTPUTS

The DSV14196/DSV14196T features failsafe receiver outputs. In failsafe mode, if the receiver input becomes zero or an open-circuit, the receiver output is pulled to a high level.

LapLink COMPATIBILITY

The DSV14196/DSV14196T can easily provide 128 kbps data rate under maximum driver load conditions of $C_L = 2500$ pF and $R_L = 3$ k Ω , while power supplies are:

$$V_{CC} = +3.0V, V^+ = 10.8V, V^- = -10.8V$$

MOUSE DRIVING

A typical mouse can be powered from the drivers. Two driver outputs connected in parallel and set to V_{OH} can be used to supply power to the V^+ pin of the mouse. The third driver output is set to V_{OL} to sink the current from the V^- terminal. Refer to typical curves of V_{OUT}/I_{OUT} . Typical mouse specifications are:

$$10 \text{ mA at } +6V \quad 5 \text{ mA at } -6V$$

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
