

TRANSZORB® Transient Voltage Suppressor

Peak Pulse Power 600W

Breakdown Voltage 6.8 to 440V

DO-204AC

Dimensions are in inches and (millimeters)

Features

- Plastic package has Underwriters Laboratory Flammability Classification 94V-0
- Glass passivated junction
- 600W peak pulse power capability with a 10/1000μs waveform, repetition rate (duty cycle): 0.01%
- Excellent clamping capability
- Low incremental surge resistance
- Very fast response time
- High temperature soldering guaranteed: 265°C/10 seconds, 0.375" (9.5mm) lead length, 5lbs. (2.3 kg) tension.

Mechanical Data

Case: JEDEC DO-204AC molded plastic body over passivated junction

Terminals: Solder plated axial leads, solderable per MIL-STD-750, Method 2026

Polarity: For unidirectional types the color band denotes the cathode, which is positive with respect to the anode under normal TVS operation

Mounting Position: Any

Weight: 0.015 ounce, 0.4 gram

Devices for Bidirectional Applications

For bi-directional use C or CA Suffix for types P6KE6.8 thru types P6KE440 (e.g. P6KE6.8C, P6KE440CA). Electrical characteristics apply in both directions

Maximum Ratings and Characteristics T_A=25°C unless otherwise noted.

Parameter	Symbol	Value	Unit
Peak power dissipation with a 10/1000μs waveform (Note 1, Fig. 1)	P _{PPM}	Minimum 600	W
Peak pulse current with a 10/1000μs waveform (Note 1)	I _{PPM}	See Next Table	A
Steady state power dissipation at T _L =75°C, lead lengths 0.375" (9.5mm) (Note 2)	P _{M(AV)}	5.0	W
Peak forward surge current, 8.3ms single half sine-wave superimposed on rated load (JEDEC Method) (Note 3)	I _{FSM}	100	A
Maximum instantaneous forward voltage at 50A for unidirectional only (Note 4)	V _F	3.5/5.0	V
Operating junction and storage temperature range	T _J , T _{STG}	-55 to +175	°C

Notes: (1) Non-repetitive current pulse, per Fig.3 and derated above T_A = 25°C per Fig. 2

(2) Mounted on copper pad area of 1.6 x 1.6" (40 x 40mm) per Fig. 5

(3) Measured on 8.3ms single half sine-wave or equivalent square wave, duty cycle = 4 per minute maximum

(4) V_F = 3.5 Volt max. for devices of V_(BR) ≤ 220V, and V_F = 5.0 Volt max. for devices of V_(BR) > 220V

Notes: (1) V(BR) measured after I_T applied for 300μs, I_T=square wave pulse or equivalent

(2) Surge current waveform per Fig. 3 and derate per Fig. 2

(3) For bidirectional types with V_{WM} of 10 volts and less, the I_D limit is doubled

(4) All terms and symbols are consistent with ANSI/IEEE C62.35

+UL listed for Telecom application protection 497B, file number E136766 for both uni-directional and bi-directional devices

Description

This P6KE TVS series is a low cost commercial product for use in applications where large voltage transients can permanently damage voltage-sensitive components.

The P6KE series device types are designed in a small package size where power and space is a consideration. They are characterized by their high surge capability, extremely fast response time, and low impedance, (R_{ON}). Because of the unpredictable nature of transients, and the variation of the impedance with respect to these transients, impedance, per se, is not specified as a parametric value. However, a minimum voltage at low current conditions (BV) and a maximum clamping voltage (Vc) at a maximum peak pulse current is specified.

In some instances, the thermal effect (see Vc Clamping Voltage) may be responsible for 50% to 70% of the observed voltage differential when subjected to high current pulses for several duty cycles, thus making a maximum impedance specification insignificant.

In case of a severe current overload or abnormal transient beyond the maximum ratings, the Transient Voltage Suppressor will initially fail 'short' thus tripping the system's circuit breaker or fuse while protecting the entire circuit. Curves depicting clamping voltage vs. various current pulses are available from the factory. Extended power curves vs. pulse time are also available.

TRANSZORB® Transient Voltage Suppressor
