Product Description

Sirenza Microdevices' SGA-4463 is a high performance SiGe HBT MMIC Amplifier. A Darlington configuration featuring 1 micron emitters provides high F_T and excellent thermal perfomance. The heterojunction increases breakdown voltage and minimizes leakage current between junctions. Cancellation of emitter junction non-linearities results in higher suppression of intermodulation products. At 850 Mhz and 45mA , the SGA-4463 typically provides +27 dBm output IP3, 19 dB of gain, and +14 dBm of 1dB compressed power using a single positive voltage supply. Only 2 DC-blocking capacitors, a bias resistor and an optional RF choke are required for operation.
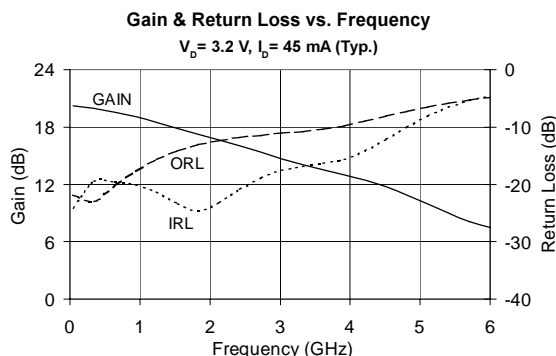

SGA-4463

DC-3500 MHz, Cascadable SiGe HBT MMIC Amplifier

Product Features

- **High Gain : 17 dB at 1950 MHz**
- **Cascadable 50 Ohm**
- **Patented SiGe Technology**
- **Operates From Single Supply**
- **Low Thermal Resistance Package**

Applications

- **PA Driver Amplifier**
- **Cellular, PCS, GSM, UMTS**
- **IF Amplifier**
- **Wireless Data, Satellite**

Absolute Maximum Ratings

| Parameter	Absolute Limit
Max. Device Current (I_D)	90 mA
Max. Device Voltage (V_D)	5 V
Max. RF Input Power	+18 dBm
Max. Junction Temp. (T_J)	+150°C
Operating Temp. Range (T_L)	-40°C to +85°C
Max. Storage Temp.	+150°C

Operation of this device beyond any one of these limits may cause permanent damage. For reliable continous operation, the device voltage and current must not exceed the maximum operating values specified in the table on page one.

Bias conditions should also satisfy the following expression:
$$I_D V_D < (T_J - T_L) / R_{TH, j-l}$$

OIP$_3$ vs. Frequency
V_D = 3.2 V, I_D = 45 mA (Typ.)
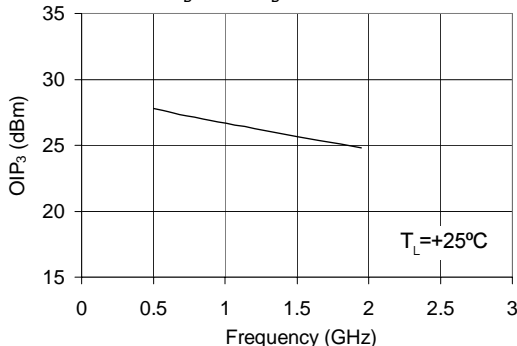

### P$_{1dB}$ vs. Frequency
V_D = 3.2 V, I_D = 45 mA (Typ.)

Basic Application Circuit
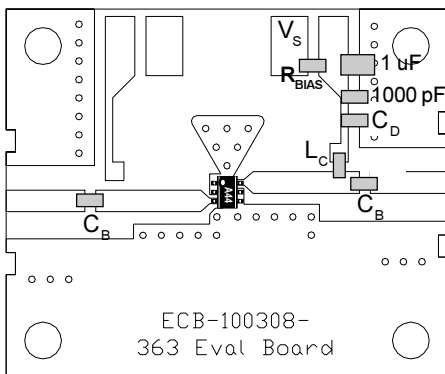

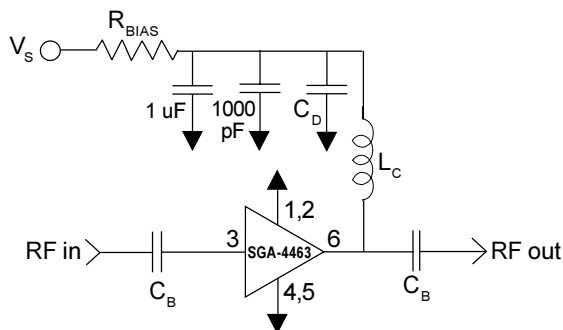

Part Identification Marking

The part will be marked with an "A44" designator on the top surface of the package.

Application Circuit Element Values

| Reference Designator	Frequency (Mhz)				
	500	850	1950	2400	3500
C_B	220 pF	100 pF	68 pF	56 pF	39 pF
C_D	100 pF	68 pF	22 pF	22 pF	15 pF
L_C	68 nH	33 nH	22 nH	18 nH	15 nH

Recommended Bias Resistor Values for I_D=45mA R_{BIAS}=(V_S-V_D) / I_D				
Supply Voltage(V_S)	6 V	8 V	10 V	12 V
R_{BIAS}	62 Ω	110 Ω	150 Ω	200 Ω
Note: R_{BIAS} provides DC bias stability over temperature.				

Mounting Instructions

1. Use a large ground pad area near device pins 1, 2, 4, and 5 with many plated through-holes as shown.

2. We recommend 1 or 2 ounce copper. Measurements for this data sheet were made on a 31 mil thick FR-4 board with 1 ounce copper on both sides.
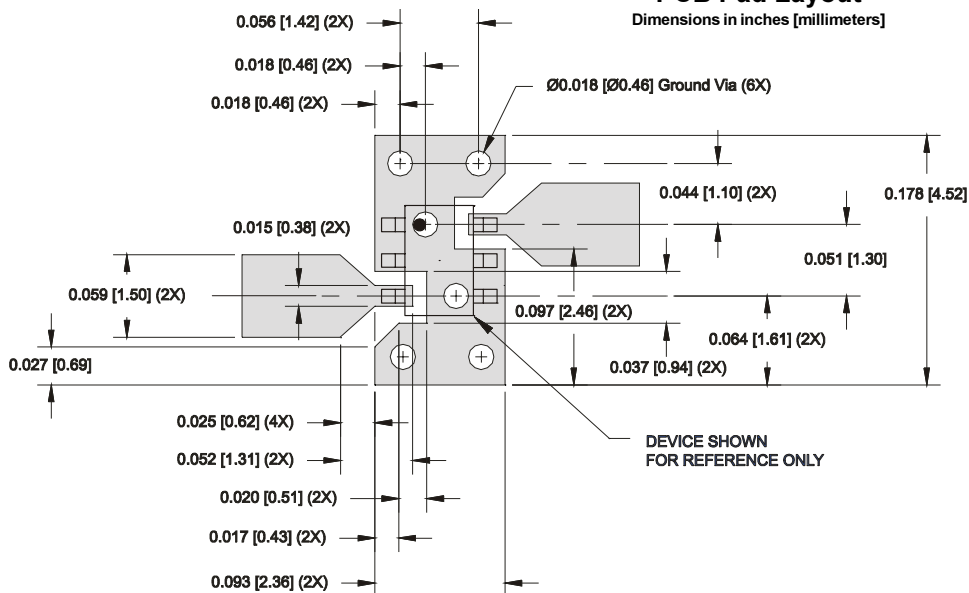

Pin #	Function	Description
3	RF IN	RF input pin. This pin requires the use of an external DC blocking capacitor chosen for the frequency of operation.
1, 2, 4, 5	GND	Connection to ground. Use via holes for best performance to reduce lead inductance as close to ground leads as possible.
6	RF OUT/ BIAS	RF output and bias pin. DC voltage is present on this pin, therefore a DC blocking capacitor is necessary for proper operation.

Caution: ESD sensitive
Appropriate precautions in handling, packaging and testing devices must be observed.
