## SINGLE SCHMITT-TRIGGER INVERTER GATE

SCLS322L – MARCH 1996 – REVISED JULY 2001

- Inputs Are TTL-Voltage Compatible
- Latch-Up Performance Exceeds 250 mA Per JESD 17

### description

The SN74AHCT1G14 contains a single inverter gate. The device performs the Boolean function  $Y = \bar{A}$ .

The device functions as an independent inverter gate, but because of the Schmitt action, gates may have different input threshold levels for positive- ( $V_{T+}$ ) and negative-going ( $V_{T-}$ ) signals.

### DBV OR DCK PACKAGE (TOP VIEW)

NC – No internal connection

### ORDERING INFORMATION

| $T_A$         | PACKAGE†           |               | ORDERABLE<br>PART NUMBER | TOP-SIDE<br>MARKING‡ |
|---------------|--------------------|---------------|--------------------------|----------------------|
| –40°C to 85°C | SOP (SOT-23) – DBV | Tape and reel | SN74AHCT1G14DBVR         | B14_                 |
|               | SOP (SC-70) – DCK  | Tape and reel | SN74AHCT1G14DCKR         | BF_                  |

† Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at [www.ti.com/sc/package](http://www.ti.com/sc/package).

‡ The actual top-side marking has one additional character that designates the assembly/test site.

### FUNCTION TABLE

| INPUT<br>A | OUTPUT<br>Y |
|------------|-------------|
| H          | L           |
| L          | H           |

### logic diagram (positive logic)

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

## SINGLE SCHMITT-TRIGGER INVERTER GATE

SCLS322L – MARCH 1996 – REVISED JULY 2001

### absolute maximum ratings over operating free-air temperature range (unless otherwise noted)<sup>†</sup>

|  |                            |
|--|----------------------------|
| Supply voltage range, $V_{CC}$                                     | –0.5 V to 7 V              |
| Input voltage range, $V_I$ (see Note 1)                            | –0.5 V to 7 V              |
| Output voltage range, $V_O$ (see Note 1)                           | –0.5 V to $V_{CC} + 0.5$ V |
| Input clamp current, $I_{IK}$ ( $V_I < 0$ )                        | –20 mA                     |
| Output clamp current, $I_{OK}$ ( $V_O < 0$ or $V_O > V_{CC}$ )     | ±20 mA                     |
| Continuous output current, $I_O$ ( $V_O = 0$ to $V_{CC}$ )         | ±25 mA                     |
| Continuous current through $V_{CC}$ or GND                         | ±50 mA                     |
| Package thermal impedance, $\theta_{JA}$ (see Note 2): DBV package | 206°C/W                    |
| DCK package  | 252°C/W                    |
| Storage temperature range, $T_{stg}$                               | –65°C to 150°C             |

<sup>†</sup> Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.  
2. The package thermal impedance is calculated in accordance with JESD 51-7.

### recommended operating conditions

|                                      | MIN | MAX      | UNIT |
|--------------------------------------|-----|----------|------|
| $V_{CC}$ Supply voltage              | 4.5 | 5.5      | V    |
| $V_I$ Input voltage                  | 0   | 5.5      | V    |
| $V_O$ Output voltage                 | 0   | $V_{CC}$ | V    |
| $I_{OH}$ High-level output current   |     | –8       | mA   |
| $I_{OL}$ Low-level output current    |     | 8        | mA   |
| $T_A$ Operating free-air temperature | –40 | 85       | °C   |

### electrical characteristics over recommended operating free-air temperature range (unless otherwise noted)

## SINGLE SCHMITT-TRIGGER INVERTER GATE

SCLS322L – MARCH 1996 – REVISED JULY 2001

### PARAMETER MEASUREMENT INFORMATION

- NOTES:
- A.  $C_L$  includes probe and jig capacitance.
  - B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
  - C. All input pulses are supplied by generators having the following characteristics:  $PRR \leq 1\text{ MHz}$ ,  $Z_O = 50\ \Omega$ ,  $t_r \leq 3\text{ ns}$ ,  $t_f \leq 3\text{ ns}$ .
  - D. The outputs are measured one at a time with one input transition per measurement.

## IMPORTANT NOTICE

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgment, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Customers are responsible for their applications using TI components.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, license, warranty or endorsement thereof.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations and notices. Representation or reproduction of this information with alteration voids all warranties provided for an associated TI product or service, is an unfair and deceptive business practice, and TI is not responsible nor liable for any such use.

Resale of TI's products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service, is an unfair and deceptive business practice, and TI is not responsible nor liable for any such use.
